Dedication to quality and innovation

Complete Line of Motorized Window Covering Systems

Ultra-Quiet Electronic Drives for Interior Applications

Simple, Quiet, Reliable, Efficient

QMT presents an extensive range of technologically advanced motorized window covering systems. Smart, ultra-quiet electronic drives offer superior performance in operating pinch pleat or ripplefold drapes as well as a variety of shade treatments, moving them silently with swiftness and ease. Built-in RF receivers allow for precise control, while Plug-n-Play technology guarantees you a quick and simple installation.

Why automate?

Automation of window coverings can bring significant benefits with increased comfort and convenience at any application level.

It helps to save energy, reduce maintenance costs and improve security when integrated with centralized building control system.

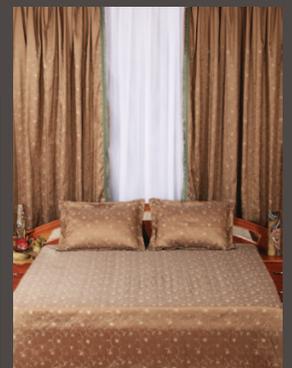

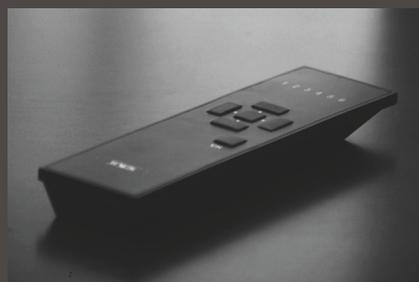

For people with disabilities, automation provides a meaningful improvement in the ability to independently control their living environment.

In today's residential market QMT systems integrate seamlessly into a modern "Smart Home" concept.

Designed for contemporary living, these motorized systems are especially useful where multiple drapes and shades are mounted in hard to reach locations.

Many of these highly advanced motors require no pre-wiring; they simply plug in and are ready to use.

QMT motorized window covering systems are ideal for any commercial setting whether they be used for boardrooms, restaurants, casinos, hospitals or hotels.

Recreation / Entertainment

Create a complete black-out atmosphere for your home theatre with one touch of a button.

QMT Finesse drapery system offers a touch-control feature which is vital for any hotel application. A slight tug on the drapes activates the electronic drive thus preventing treatments from being damaged in cases where guests are unaware of motorization.

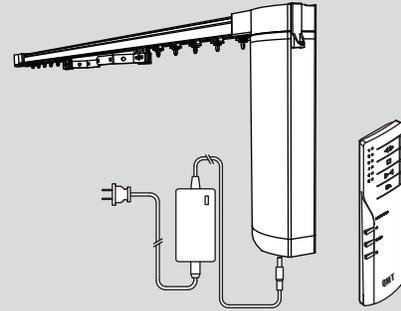

Private / Residential

Take full control of your double treatments. A single remote control unit allows you to open and close sheers and drapes individually or in groups.

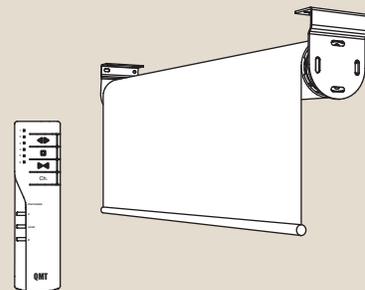

QMT Drapery Platform

A new generation of powerful drapery motors featuring low energy consumption and state of the art noise reduction technology is now available from QMT. Our drapery track systems provide smooth and efficient performance for the most demanding interior applications bringing in real flexibility of operations and easy setup, with the highest level of reliability. Track can be bent according to specifications.

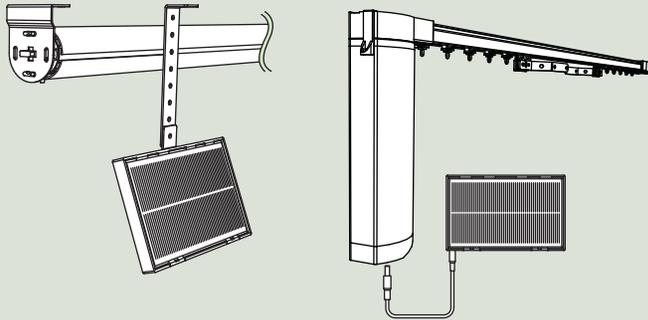

QMT Tubular Platform

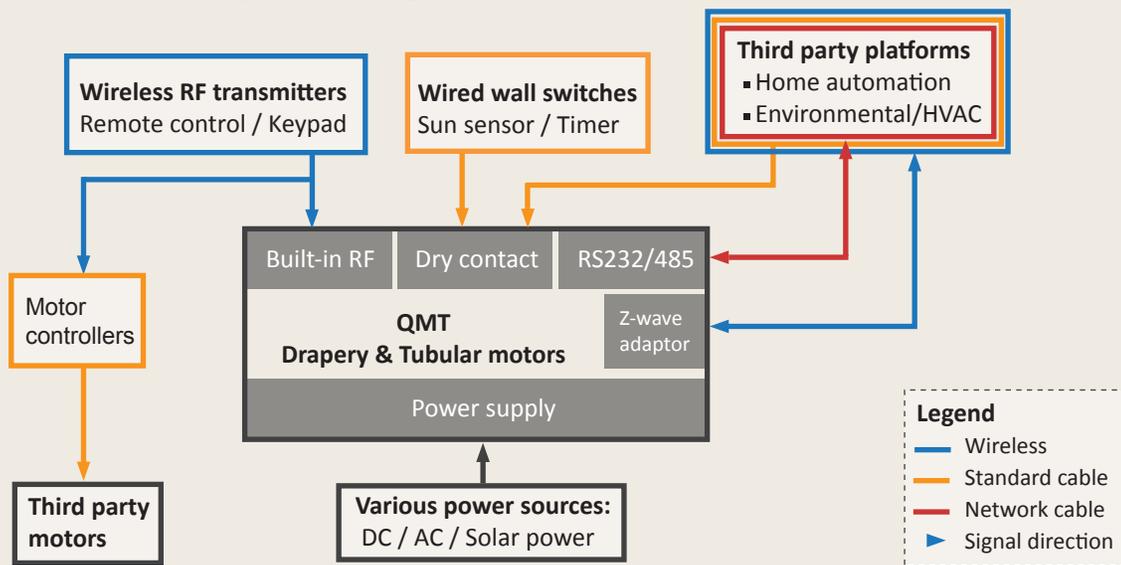

QMT offers the best in modern shading solutions by providing motorized systems for all styles of Roller, Roman, Austrian and Balloon shades. Our comprehensive line of tubular motors with various hardware sizes and wide range of power source options ensures complete coverage for all interior shade requirements. Ultra-quiet models feature an innovative high efficiency gearbox, delivering maximum strength with minimum noise and vibration.

Solar Powered Systems

QMT is proud to present compact Plug-n-Play solar powered motorized window covering systems. Our new truly innovative solar powered motors have been designed and engineered to overcome past aesthetic and practical limitations. Completely maintenance free and with no need for electrical wiring, these solutions provide unprecedented flexibility and convenience to enjoy automated daylight control.

Control & Integration Options

We provide you with the tools and resources for a seamless integration into any commercial or residential Automation / Light control system.

QMT Automation Solutions features an exclusive line of technologically advanced, ultra-quiet motorized systems for interior window covering applications in commercial and residential markets.

We offer the finest quality products to interior designers, architects, specifiers and fabricators all around the globe.

QMT products are distributed through a nationwide network of authorized dealers and are complemented with full technical support to assist you in every step of your project.

Our company is constantly developing new technologies and innovations to deliver the absolute best in window covering solutions to keep up with an ever-changing world.
